

**LAFLECHE ENVIRONMENTAL, INC., EXEMPLIFIES COMMITMENT TO PROPER WASTE DISPOSAL**  
**WINS SWANA 2015 EXCELLENCE AWARD**

Moose Creek, Ontario (June 17, 2015) – The Solid Waste Association of North America (SWANA) announces that Lafleche Environmental, Inc., has been named the winner of the SWANA **Gold** Excellence Award in the Composting category.

Lafleche Environmental Inc. is one of the Transforce, Inc., companies operating an integrated waste management facility, strategically located in Moose Creek, Ontario, Canada, consisting of a bioreactor landfill, waste water treatment, composting, and landfill gas to energy.

Brian R. King, President of Lafleche stated “This award is possible due to the dedication of the Lafleche team members and their commitment to excellence, innovation and environmental sustainability.”

Since August 2009, Lafleche has been processing organics in its state-of-the-art compost facility receiving various biodegradable feedstocks and bulking agents. The process consists of mechanically agitating the materials in enclosed channels equipped with forced aeration. Due to high demand, in 2013, the company doubled its processing capacity; making it one of Canada’s largest composting facilities servicing Ontario and Quebec. The company can process up to 120,800 metric tonnes of organics and 120,000 tonnes of bulking agents annually, producing high quality compost.

SWANA’s Excellence Awards Program recognizes outstanding solid waste programs and facilities that advance the practice of environmentally and economically sound solid waste management through their commitment to utilizing effective technologies and processes in system design and operations, advancing worker and community health and safety, and implementing successful public education and outreach programs. Programs also must demonstrate that they are fiscally and environmentally responsible through their compliance with all applicable federal, state and local regulations.
